Abstract: Crucibles of leadership (Bennis and Thomas 2002 HBR) are unexpected transformative events which force the individuals involved to reflect upon their experience and how it forced them to meet the challenge. The events described in this session revolve around the unexpected trauma of a medical school dean accused of plagiarism of a convocation speech and then his resignation within 6 days of the initial incident. The upheaval to a faculty already reeling from multiple external changes and poor morale are discussed. Strategies around approaching an unexpected situation are presented along with the goals to provide a sense of stability and healing back into the community. The applicability of the goals to other situations are discussed, in particular to a health system environment.
